ABOUT

I'm a software engineer and data science student driven by curiosity about how systems work at every level. I build games, tools, and applications while diving deep into the underlying technologies. I'm passionate about solving complex problems across different domains and creating software that delivers real value.

EXPERIENCE

Software Engineering Intern at Tanit Consulting AB (FrostLink) *Jul 2026 - Aug 2026*

- Nine-week internship on FrostLink, a React Native and Expo app for skiers and snowboarders; three releases (1.1.2 to 1.1.4) went out during it, with part-time work after.
- Rebuilt the trip-matching engine as a weighted score over seven dimensions with a broadening ladder and a 35% fit floor, and took the Firestore rules from a few permissive checks to 387 lines.

FrostLink · Project Page · Internship Report

Internship at SQUARE-IT *Jul 2025 - Sep 2025*

- Built a career-management module for the HRMaps HRMS during a three-month internship in ASP.NET and Angular, including CareerIntelligenceService, which turns performance reviews, skills and tenure into promotion-readiness scores, attrition-risk predictions and skill-gap recommendations.
- Designed a role-aware approval workflow where manager-initiated promotion and transfer requests skip the standard queue and route directly to HR.

Freelance Game Developer *2021 - 2025*

- Delivered independent game projects and client work on Fiverr and Upwork, holding a 5-star rating across 17 Fiverr reviews.
- Worked directly with clients from brief to delivered build, handling scoping, implementation and communication.

Fiverr Profile · Upwork Profile

Senior Game Developer at Novel Bomb *2021 - 2024*

- Sole in-engine programmer and lead developer on Stock Boy, a commercial 2D action-adventure in Unity, in a 4-person team.
- Owned all in-engine work: gameplay systems, custom tools, level design and implementation.

Stock Boy

EDUCATION

Data Science Engineering Degree - ESPRIT *2023 - Present*

Final-year Data Science engineering student focused on machine learning, statistical analysis and software engineering. Currently seeking an end-of-studies internship (PFE) starting January 2027.

Pre-Engineering Degree - IPEIB *2020 - 2023*

Multidisciplinary preparatory program in mathematics, physics and computer science, preparing for competitive engineering schools.

CERTIFICATIONS

Building Transformer-Based Natural Language Processing Applications · *NVIDIA* · *Oct 2026* · Verify

Hedera Certified Developer Associate (HCDA), Foundation (HCF) and Business Foundation (HBF) · *Hedera Hashgraph* · *Oct 2026* · Verify

FEATURED PROJECTS

FrostLink

Nine-week internship at Tanit Consulting AB, July to August 2026: rebuilt the trip-matching engine, wrote the 387-line Firestore rules file, and built Piste, the review workflow I ran on 41 of my review passes.
React Native, TypeScript, Firebase, Expo, Mobile Development

LLM Agents Traffic Controller (MARL)
A language model layer for traffic signals: three role agents, a supervisor, an arbiter and a safety shield on top of Eclipse SUMO, with the latency work and the benchmark against Max-Pressure on a real Tunisian district.
Python, LLM, SUMO, Reinforcement Learning, FastAPI, React

Pilot - Internship Discovery & Application Pipeline
The tool I use to find and apply for internships: keyless discovery across job and ATS boards, LLM fit scoring against my own profile, per-application CV and cover-letter tailoring, and browser autofill that leaves the submit click to me.
Python, LLM, Playwright, SQLite, CLI

DQN From Scratch
Deep Q-Network implemented from scratch in C on a custom Sokol game stack: hand-written forward pass and backprop, experience replay, target networks and a training curriculum, applied to Pong.
Reinforcement Learning, C, Deep Q-Network, Neural Networks, Sokol · Github (Source Code)

CredVault
Local-first, zero-knowledge credential manager shipped as a Rust and Tauri desktop app: Argon2id and AES-256-GCM, one encrypted file, no network calls, installers for Linux and Windows via CI/CD.
Rust, Tauri, Encryption, Desktop Application, CI/CD, React · Github (Source Code) · Github Releases (Download)

Stock Boy
Commercial 2D action-adventure in Unity, developed with Novel Bomb as sole in-engine programmer and lead developer on a 4-person team.
Unity, C#, Commercial Game, 2D Game, Team Lead · Website · Itch (Play Demo)

VOLUNTEERING

Game Jam Creator & Organizer *2025*
Founded CSJAM, a 24-hour game jam with 50 participants, organized with the Tek-up IEEE Student Branch.
CSJAM

IEEE Tek-up Student Branch, Computer Society Webmaster *2023 - 2025*
Maintained the chapter website and social media, and joined technical workshops and competitions.

SKILLS

Programming Languages: C#, C, Python, Rust, TypeScript, JavaScript, SQL
Game Development: Unity, Godot, MonoGame, Raylib, Sokol, SDL2, ECS
Web Development: ASP.NET, Django, Flask, Angular, React, Next.js, HTMX, Tailwind, Supabase, Tauri, HTML/CSS
Mobile Development: React Native, Expo
Machine Learning: PyTorch, LangChain, NLP, RAG, Multi-Agent AI, BERT
Data & Analytics: Pandas, NumPy, Power BI, Row-Level Security, Data Visualization
Tools & DevOps: Git, GitHub, Docker, Linux, REST APIs, CI/CD, Netlify
Spoken Languages: Arabic (Native), French (Fluent), English (Fluent)
